100% SWISS MADE

MANUFACTURE

Every ski and snowboard is designed, developed and produced in Schwanden in the Canton of Glarus. Precise handwork and a love for detail guarantee that our products are of the highest quality possible.

From the first blueprints to the well-engineered end products, our skis and snowboards go through elaborate development and production processes. Swiss craftsmanship paired with

modern technology ensure that our products meet the highest quality and performance standards.

The results are perfectly handcrafted products - Made in Switzerland.

«With a great love for detail,
we produce quality Swiss-made skis and
snowboards of the highest value.»

PRODUCTION SITE IN SWITZERLAND

By manufacturing our products exclusively in Switzerland, we deliberately set up a countertrend in the ski industry. This has significant advantages in many respects. Thanks to the local infrastructure, new ideas and feedback from nearby test routes can directly influence our products. By controlling every production process, we can ensure that innovative developments are integrated into our products to ensure their high quality and performance.

«Modern production technology, as well as nearby test routes, form the backbone of our well-engineered and high-quality products.»

TECHNOLOGY

TIMELESS DESIGN

We demand the highest quality from our raw materials and handle them with passion and precision. Beneath the timeless and spatially optimized surface of our products are only premium materials.

The exquisite wood at the core is still the best recipe against unwanted vibration and for high performance. Depending on the area of application, the selected sidewall materials ensure maximum ice grip. Every component of Kessler products deserves the «Premium» seal according to our credo: «Pure Exterior, Maximum Power Interior.»

PURE EXTERNAL AESTHETICS...

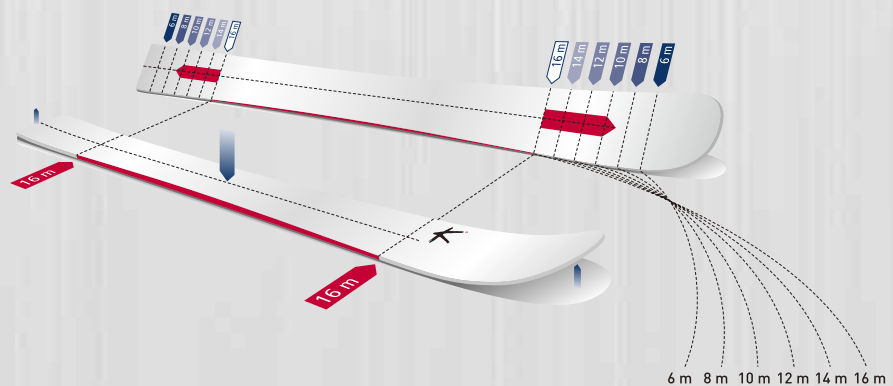

...MAXIMIZED INTERNAL PERFORMANCE

PATENTED TECHNOLOGY

KST (Klothoid Shape Technology) is the patented technology used in all of our products. This type of construction was originally developed for snowboard racing and was successfully adopted for the manufacture of skis. With KST, different radii, which are achieved depending on the angle of the skis, define the driving line. As a result, the ski is more versatile. Small, tight curves, as well as wide curves, are possible with the same ski.

The original construction has been constantly perfected during the last 20 years thanks to the close collaboration with Olympians and world champions. This experience can be felt in every product and is revealed through the high performance and easy handling of every one of our skis and snowboards.

Patent CH697123

«The secret of KST is the dynamic interplay between the baseline and the sidecut.»

BOARDS

PERFORMANCE, QUALITY AND
SWISS CRAFTSMANSHIP

X-CARVE

X-CARVE, the new board from Kessler's range of snowboards, provides for even faster and more precise carving. The proven construction of Kessler snowboards with multiple titanium layers ensures that the board rides smoothly and has torsional stiffness. A progressively decreasing sidecut in the tail area paired with the modern design at the front raises the carving experience to a new level. The board's width and 6x2 inserts give you increased flexibility to achieve your optimal binding setting.

FEATURES

- patented Kessler Shape Technology
- Clothoid Sidecut
- Sandwich Titanal Construction
- optimized K.Tec BP woodcore
- ABS Sidewalls
- sintered Base

THE CROSS

It is amazing how easy carving can be with a soft boot and surprising how smoothly THE CROSS handles in all types of conditions. THE CROSS is the ultimate all-round board concept from the Kessler snowboard range and has made its mark in the world of snowboarding! Gold medals at Winter Olympic Games and at World Championships were won with THE CROSS in Boarder-X.

CONTOUR

Are you ready for freshly snow-covered deep-snow slopes or hard-packed pistes? With the new CONTOUR, anything is possible. The uncompromising power of this board ensures breathtaking performance in all conditions. The tapered directional shape gives the board enormous float in deep snow and conveys a unique surf feeling. The tried-and-tested Kessler Shape Technology also ensures enormous riding fun when carving on the piste. Depending on conditions and preferences, 7x2 inserts give you plenty of freedom when mounting your binding. With the new CONTOUR, you are ready for anything.

ROCKET CROSS

The K. Plate Rocket Cross has been designed to meet the highest demands of Boarder-Cross-Riders. Due to the increased elevation, the board can now get even more edge without the boot or binding touching the snow. The sleek form of the binding plate guarantees an equal application of pressure on the board whilst increasing the grip of the edges and improving riding stability.

The K. Plate Rocket Cross can be customised to the width of the board, and can be easily mounted on your own.

Length: 310 mm

Weight incl. screws: 1200 g

Adjustable width: 230, 242, 252 mm

Art.-No. KS91.032
